"SORBEAD INDIA" truly specializes in "Adsorbents & Desiccants".
Chromatography is a technique to separate a mixture of compounds. We are a manufacturer of the most effective chromatography adsorbents like Silica gel, Aluminum Oxide, and TLC plates. Silica gel for column chromatography has been tested, approved, and used in many industries and organizations like pharmaceutical companies, Biotech, life science companies, etc. Aluminum oxide for chromatography is a fine-grained powder, a highly porous form of aluminum oxide. Its surface is more polar than silica gel. Thin-layer chromatography is performed on a sheet or plate of glass, aluminum foil, or plastic coated with a thin layer of solid adsorbent material.
