After making a modest beginning in 1997, today SODA is one of the largest chlor-alkali producers in the Middle East specializing in the manufacture of very high quality Anhydrous Caustic Soda (sodium hydroxide) using world class state of the art facilities with technology supplied by Bertrams AG, Switzerland. Anhydrous Caustic Soda (sodium hydroxide) is produced by multi-stage evaporation process and transformed into the solid state either as micro spherical particles called Prills (Pearl) or as Caustic Soda Solid (Fused). Prills (Caustic Soda Prills) Solid (Caustic Soda Solid [Fused])
